1 Story: Admins can log into the website and run a session with a quiz

1.1 Analysis - Breakdown of Tasks

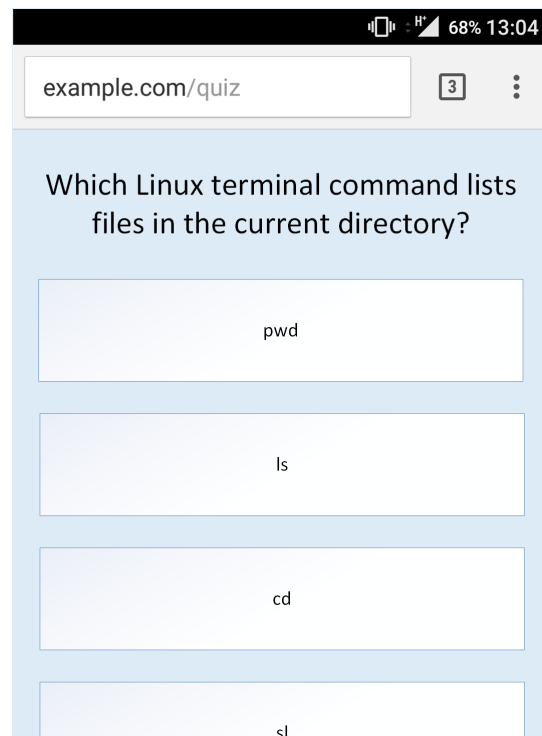

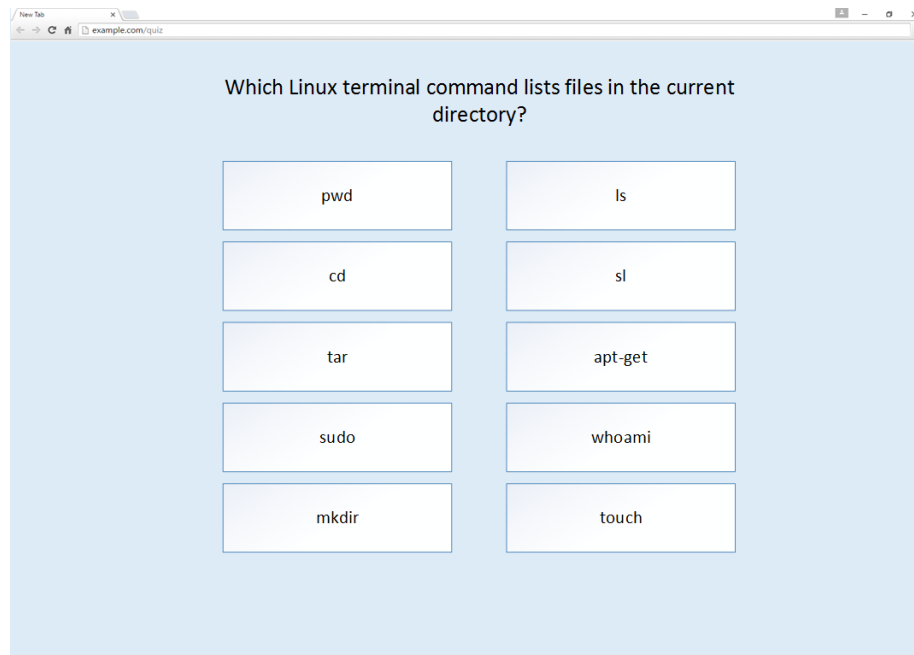

After doing some spike work last week, this task can now be approached and broken into several sub tasks:

- Set up config for Pusher
- Add event for broadcasting
- Write a command to trigger this event
- Add a button to quizzes to trigger this event
- Display this on the front end using the javascript which listens for Pusher events
- Add a session key box to front page
- Add session id to users
- Allows admins to change their id
- When admin clicks run, this id can be entered into the key box to join a channel with the name of the id
- The user will be presented with the initial quiz page which will be default filled with the name and description of the quiz
- The admin will see the same page but with an "admin panel"
- This admin panel has a next and previous button for questions
- When these buttons are pressed, the question is sent to pusher
- These question are rendered as a form on the user end and admin end
- The user can submit the form

1.2 Design

Here are some mockups of the user end of the system (TODO: label and caption these images):

1 STORY: ADMINS CAN LOG INTO THE WEBSITE AND RUN A
Alex Taylor SESSION WITH A QUIZ

1.3 Implementation

It began by configuring pusher, creating an event and writing some basic javascript to append to the front page.

1.4 Testing
