1 Tables

2

1 Tables

There will be five tables:

1. Admins
2. Admin-Details
3. Quizzes
4. Questions
5. Quizzes-Questions

The first two store information about the Admin users, i.e. the lecturers, the Admin table being used to store the name, email and other details, whilst the Admin-Details table will be for storing password and login details.

Quizzes will store the name of a quiz and the id of the admin who created it. The Questions table stores all the questions created and the Quizzes-Questions table is the link between the two. It stores which questions belong to which quiz.
