Alex Taylor 1 TABLES

1 Tables

There will be six tables:

- 1. Admins
- 2. Admin_Details
- 3. Quizzes
- 4. Questions
- 5. Quizzes_Questions
- 6. Sessions

The first two store information about the Admin users, i.e. the lecturers, the Admin table being used to store the name, email and other details, whilst the Admin_Details table will be for storing password and login details.

Quizzes will store the name of a quiz and the id of the admin who created it. The Questions table stores all the questions created and the Quizzes-Questions table is the link between the two. It stores which questions belong to which quiz.
